National Training Center RUECVET at the Nukus State Pedagogical Institute

As part of the RUECVET Erasmus + project, four training centers have been created (2 in Russia and 2 in Uzbekistan). These centers are aimed at providing practical support to those universities and vocational education and training (VET) organizations in Russia and Uzbekistan that study, experiment, practice and are gradually introducing ECVET (European credit system for vocational education and training) as an innovation into the national education system of these countries.

In VET of Uzbekistan, the relevance of introducing such a system is due to the need to increase the efficiency and quality of vocational education in order to train national personnel that meet the demands of employers and are able to compete in the international labor market. The transparency of the qualification process, the possibility of academic and labor mobility makes ECVET an attractive tool to achieve these goals.

RUECVET National Training Center in NukSPI is equipped with modern computer technology using grant funds and serves as an ECVET/ ECTS laboratory for the development and implementation of the ECVET methodology in Russia and Uzbekistan. As a methodological basis for the dissemination (in off-line and on-line modes) of knowledge and information on ECVET, NTC can provide advisory and educational services to specific target groups.

Any group or individual interested in understanding the European tool for the transfer and accumulation of credits in ECVET in the field of vocational education and training can use the services of our training center:

- Teaching staff of universities and vocational colleges interested in ECVET
- Vocational educational programs, faculty, students, VET Trainees
- Administrative staff in vocational and training institutions
- National & Government Agencies working in the VET & HE area
- VET & HE Policy Makers
- Qualification Agencies
- Labour representatives
- Professional associations etc.

Currently, NTC RUECVET NukSPI organizes various trainings and seminars for VET employees, can provide on-line consultations through the project website www.ruecvet.uz

Also, everyone can study on-line on: <https://bit.ly/2Uvy3Vg> or <http://ino.rsvpu.ru/programma/evropeyskaya-sistema-zachetnyh-edinic-v-professionalnom-obrazovanii-ecvet>

The training program is aimed at methodological support of the introduction of the ECVET credit system in vocational education and training in Uzbekistan.

At the end of the course, students will be able **(Learning outcomes):**

LO1. Determine the legal framework for the application of ECVET in the national VET system

LO 2. Define learning outcomes and assessment criteria in the context of ECVET

LO 3. Develop units of learning outcomes for the selected qualification

LO 4. Facilitate the access of students and teachers to mobility in VET

After class sessions, the learners receive a task for independent (with the help of trainers) performance: determining learning outcomes based on an analysis of a specific qualification, developing a unit of learning outcomes in terms of knowledge, skills and competencies (meaning autonomy and responsibility), as well as criteria for learning outcomes assessment. The student receives a certificate of completion of the training after successful completion of independent work.

Trainers of NTC RUECVET NukSPI held workshops for teachers of colleges and universities of Karakalpakstan, as well as for heads of vocational education institutions in Tashkent and Samarkand regions.

2019-2020 Ўзбекистон Тренерлар Мадрасалари

The NTC plans, together with other partners, to widely disseminate the ECVET methodology for implementation in the national VET system. To realize these tasks, cooperation has been established with the Ministry of Higher and Secondary Specialised Education of the Republic of Uzbekistan and its branch in Karakalpakstan. The RUECVET project Policy Recommendation Report has been submitted to MHSSE.

The Ministry noted that the introduction of a credit-module training system based on the best European practices, as innovations in the field of professional education of the republic, is a very important step for the implementation of the policy tasks outlined in Presidential Decree No. 5812 of September 6, 2019 “On additional measures to further improve the vocational education system” The experience of the RUECVET project should be disseminated, and activities to introduce a credit system in vocational education and training of the republic should be continued.
